**College Code:**

# SOLUTION:

## FARMER INTERFACE:

- Farmer provides crop information which will be saved in the database using SQL.
- Opt for courier/physical delivery .
- Statistical representation showing farmers progress over time.

## CUSTOMER INTERFACE:

- Variety of crops as searched by the customer is displayed.
- Savings possible (Portal Price < Market Price) through statistical .
- Opt from given payment modes as convenience.
- Ratings will be provided to product of farmer based on customer feedback.

## HELP/GUIDANCE:

- Assistance provided to low rated farmers by pre-registered organisations.
- Organisations such as fertilizer producing companies and soil testing labs.
- Helpline numbers of pre-registered organisations provided on the portal.

## FORUM FOR CUSTOMERS AND FARMERS:

- Creation of Q&A forum for farmer and consumer interaction.
- Already answered queries will be displayed by BOT.
- Specific results provided based on the keywords.

## MESSAGING/CUSTOMER CARE:

- SMS and Mobile Computing facility provided for farmers devoid of internet connection.
- Updating the status of crops through SMS.
- Q&A facility also through SMS.
- Toll-free number available 24/7.

## TECHNOLOGIES USED:

- Machine Learning algorithms such as KNN, K-Means and NLP.
- Artificial Intelligence.
- Data Visualization.
- Website on cloud.
